**A friend of mine went to Japan to visit his nephew who is working there. When he went to his nephew's place I believe it was a shrine he asked to pray for a job at the shrine. His nephew responded by saying that they already have people from Spain, Italy, Netherlands, Belgium and now Japan. "Maybe we should take them on! " he says.**

The staining pattern of pig spermatozoa on the basis of the acrosome and the cytoplasm has been reported by several authors. We collected semen from five boars, determined the proportion of acrosome-reacted spermatozoa (AR), and evaluated the stainability of the acrosome and cytoplasm. Of the total number of spermatozoa examined, 47.5 +/- 5.6% were reactive with the PAS reaction, whereas 83.7 +/- 5.8% were labeled with fluorescein-PNA. The percentages of AR and total stained spermatozoa were similar. The proportion of spermatozoa having a vesicular acrosome ranged from 9.1 to 20.3%. These data, in association with the knowledge gained by other authors on this subject, are used to propose a revised classification of pig spermatozoa on the basis of the staining pattern.Q: Получить значение каждой записи, а не только первой Добрай недели всем.
