We have already mentioned three books of Pharmacognosy by C.K. Kokate et.al. One of them being Nirali Prakashan is published by Academic Press. Elsevier publishes two books Pharmacognosy: Genetics and function of drugs of plant origin by Nicholas Loxdale and The journal of Pharmacognosy and Phytotherapy, British Pharmacopoeia Centre Pharmacognosy is one of the core areas of Pharmaceutical Sciences which deals with study

of drugs of natural origin. From the point of view of competitive examinations like GPAT, it is very essential to have a thorough knowledge of this subject because a good number of questions (usually 15-20) are asked from this subject alone. If we include Phytochemistry (Chemistry of Natural products) the total number of questions that can be expected from these two subjects can easily exceed 30. This indicates that these two subjects will play a big role in the final GPAT exam. However, due to a general lack

of interest and deficiency of faculty who specialize in these subjects, many GPAT aspirants often find it difficult to prepare these subjects thoroughly. In this discussion, we try to highlight some important topics to read and books to refer for Pharmacognosy. It is always a good idea to refer at least two text books for any subject. As far as Pharmacognosy is concerned, almost all the universities in India prescribe the following text books for Undergraduate as well as Post Graduate course in

Pharmacognosy. 1.Pharmacognosy Trease and Evans, Elsevier Publications 2.Pharmacognosy C.K. Kokate et.al., Nirali Prakashan 3.Pharmacognosy T.E Wallis, Churchill Livingstone Publications 5ec8ef588b
