This lets people work efficiently and work together without having their images leave their screen. You can share for review projects by email, on the web, or through the Mac App Store, and when you do, everyone who's invited will be able to see what you're doing, comment on large or small changes, and quickly get back to work. With this new feature, people can easily stay on top of projects, try new ideas, and discuss and resolve issues as they happen. Also, work that you share through Share for Review can be easily shared and viewed. This lets you send others a link to your project that they can view and comment on, so they're integrated into the project right away. The ability to place what others see, and where they can comment, in reverse chronological order lets you see what they see first and react to what they're creating; at the same time, you can still focus on your own work. While most web editors and browser applications only provide limited editing functions, on the desktop app Adobe introduced a powerful selection tool that dramatically improves the way you edit images. Now, with the redesigned selection tool, you can quickly select and accurately crop objects in your images by using a point-and-click, or by using your mouse to move and define the area you want to select. With these capabilities in the toolset, Photoshop CC 2019 will make selecting objects in your images into a breeze.
